

Engraving Machine Application

Thank you for downloading the Engraving Machine Control Application.

This application allows you to prepare engraving jobs by generating the necessary G-code instructions. These G-code files can then be used with your engraving machine (mechanical or laser), provided the machine supports G-code input.

■■ Important:

The application does not directly control the engraver in its standard version. It produces G-code that can be loaded into your engraver's own software.

Installation Instructions

Option 1 – Recommended (Installer)

1. Download and run the installer: "engraver-desktop Setup 1.0.0.exe"
2. Follow the on-screen instructions.
3. After installation, start the application from the Start Menu or Desktop shortcut.

Option 2 – Portable (No Installation)

1. Download the ZIP file: "EngraverApp-portable.zip"
2. Extract the contents to any folder.
3. Open the folder and double-click "engraver-desktop.exe" to run the application.

Features

- Generates G-code for both deep engraving and laser engraving jobs.
- Offline-first: no internet required for daily use.
- Online-ready: can receive over-the-air updates when connected.
- Machine-independent: G-code can be used with any engraver that supports it.

Custom Implementations

Every business and machine setup is unique. We offer professional services to:

- Implement a customer-specific User Interface (UI).
- Adapt the application for a specific engraving machine model.
- Provide end-to-end integration for direct machine communication.

If you require a tailored solution, please contact us.
